

## Kimplas Make “Trustlene Brand” Multi alignment Clamp - Variable For Pipe Size 16 - 63 MM.

### Overview :

- These tools have been designed to restrain and align pipes before and during the electrofusion process
- They work with pipes between 16mm and 75mm diameter
- The tools have been designed to work specifically on Service connection pipe, and can be used to hold fittings on to tapping saddles
- The backbone of the clamp rotates to allow 45 degree and 90 degree elbows to be clamped
- The holding profiles rotate to allow various sizes of pipe to be held. Different sizes can be selected on each arm to allow reducers to be clamped
- The tool is completely adjustable, making it versatile for every installation

### Specifications :

- Profiles are available in the following sizes:  
16, 20, 25, 32, 40, 50, 55, 63
- The clamp is made from plated aluminium, steel and nylon.
- Size 19 cm x 18 cm x 15 cm
- Weight 1.1 kg
- These tools are designed to comply with British Gas GISPL2-5:2006 specifications

### Features :

- Each side of the clamp has a rotating plate that has cut-outs of different sizes. These profiles can be rotated to clamp different diameters of pipe
- The Straight clamp is designed to hold straight fittings only and is small simple to use
- The Universal clamp has an adjustable backbone that can be adjusted to 45 degrees and 90 degrees
- The Variable clamp also allows the arms to slide in and out of the backbone allowing elbows to be clamped directly onto a short-outlet tapping saddle
- The clamp is small and lightweight allowing it to be used in confined spaces
- Additional profiles can be used to allow a wider range of pipe sizes to be clamped
